

AQUA
 SPA

AQUASPA. With natural marine algae extract from SEA KELP (*Ascophyllum nodosum*)

Algae contain trace minerals, mineral salts, vitamins and amino acids which skin cells are able to assimilate directly. They also contain vitamin C, alginates and mannitol and are therefore a natural moisturizer and effectively eliminate free radicals which are the major cause of premature ageing of the skin.

Thanks to sea kelp's composition and mode of action, it acts as a tonic, cell regenerator, has antiseborrheic properties, helps drain excess fluid and is soothing.

The presence of chloroglucinol and bromophenol endow it with antibacterial properties.

You probably didn't know that...

One kilo (2.2 pounds) of algae (seaweed) has as much iodine as 10,000 litres of sea water and is 500 times richer in calcium and vitamins than the sea water it thrives in.

The AQUA SPA Marine Algae collection contains no artificial colouring or preservatives of the paraben family.

Your customers will be grateful.
